HEATMISER CONTROLS

Heatmiser Temperature Sensor Probe

Wired remote sensor, air or floor.

A wired remote sensor for Heatmiser thermostats that accept one. It measures air or floor temperature and is designed to be used as a floor sensor under UFH, where it lets the thermostat control or limit the floor.

CODE

HM-SENSOR-PROBE

PRODUCT

01 · IN THE BOX

What you get

- 1 sensor probe

02 · YOU WILL NEED

Tools and materials

- Conduit for floor fitting
- Small screwdriver

03 · SAFETY

Before you start

- Isolate the thermostat and its circuit before wiring the sensor.
- A qualified electrician must make the final connections where the circuit is mains powered, to BS 7671.
- Route sensor cable away from mains cables to keep readings steady.

04 · INSTALLATION

Fit it in 5 steps.

1. Isolate the thermostat circuit before wiring.
2. **For floor sensing: lay the probe inside a conduit, between the heating cables or pipes and never on top of them, so it reads the floor and not the heat source.** Seal the conduit end.
3. For air sensing: mount the probe (in its housing if wanted) where it reads true room air.
4. Wire the probe to the thermostat sensor terminals per the thermostat manual.
5. Select the matching sensor mode on the thermostat.

05 · TESTING AND COMMISSIONING

Test, check, then hand over

- [ ] Check the thermostat shows a sensible reading from the probe before the floor goes down.

06 · CARE AND MAINTENANCE

Keep it working

- If a floor probe fails, pull it out of the conduit and draw a new one in: no floor needs lifting.

07 · WORKS WITH

Parts that fit with it

Heatmiser Edge | Heatmiser neoStat V3 | Pipe Conduit | Heatmiser Sensor Probe Housing for wall mounting
