MANIFOLDS & COMPONENTS

Manifold Auto Air Vent End Unit

Automatic air release for the manifold bar.

Fits on the end of a manifold bar and lets trapped air out of the system on its own. A spare or replacement, or for building a manifold from parts.

CODE

MHM-AV

PRODUCT

01 · IN THE BOX

What you get

- 1 air vent end unit

02 · YOU WILL NEED

Tools and materials

- Spanner

03 · SAFETY

Before you start

- Installation should be carried out by a competent installer, in line with the system design and BS EN 1264.
- Isolate and drain down, or isolate with the manifold ball valves, before working on a filled system.
- Hot water and pressure can cause injury. Let the system cool and release pressure before opening any joint.

04 · INSTALLATION

Fit it in 4 steps.

1. Isolate the manifold with its ball valves and release the pressure.
2. Remove the old vent or blanking plug from the top of the bar.
3. Fit the new vent end unit, vent cap facing up.
4. Open the vent cap so it can release air, then open the ball valves and refill.

05 · TESTING AND COMMISSIONING

Test, check, then hand over

- [x] Watch the vent while filling. It should hiss as air escapes, then stop once full.

06 · CARE AND MAINTENANCE

Keep it working

- If it drips or sticks, isolate the manifold and replace it.

07 · GOOD TO KNOW

When to use it

Fit an air vent at the high point of each manifold bar. If an existing vent drips or sticks, isolate the manifold with its ball valves before you change it.

08 · QUESTIONS

Asked by installers

Does the Dualmix manifold already have one?

Yes. The Dualmix assembly comes with an air vent fitted. This is a spare or replacement.

Is it a single unit?

Yes. It is sold as one end unit.

09 · WORKS WITH

Parts that fit with it

Manifold Pressure Gauge End Unit

Manifold Ball Valve Set 1"

1" Male Manifold Blanking Plug
