Underfloor Heating Grid Membrane 1.2m Wide

Printed grid for setting out pipe centres

Code: MH-GRID-1.2x50, MH-GRID-1.2x100

In the box

- 1 roll of grid membrane

You will need

- Sharp knife
- Tape measure
- Tape to hold the laps

Safety

- Installation should be carried out by a competent installer, in line with the system design and BS EN 1264.
- Wear gloves and eye protection when cutting pipe, handling metal plates or using hand tools.
- Release system pressure and let pipework cool before cutting into or disturbing any filled pipe.

Installation

1. Fit the edge insulation, then lay the floor insulation.
2. Roll the membrane out over the insulation with the grid face up.
3. Line the grid up with the pipe layout and trim to fit at walls.
4. Overlap and tape the joints so screed cannot get under the membrane.
5. Lay the pipe along the grid lines at the design centres and fix it with tacker clips.

Testing and commissioning

- ✓ Fill and flush each loop one at a time, vent the air, then raise the system to 6 bar with a test pump.
- ✓ Hold 6 bar for 1 hour. A small drop can come from water temperature change; a leak usually shows within the hour.
- ✓ Have the test witnessed and signed off, and keep the pipe under pressure while the screed is laid.
